

How To Run The Chat System From Command Prompt

1. Compile the classes:

*javac *.java*

2. Run the RMI interface compiler on your implementation class:

rmic Server

This step generates some additional Java classes. They're stubs and skeletons used by RMI. Note that the rmic compiler runs on a .class file, not a .java file.

3. Start the RMI registry:

start rmiregistry

4. Run policy file:

java -Djava.security.policy=Policy.policy

5. Start your RMI server program:

start java Server

6. Run your client program:

java Login
